DIFFERENT WHITE LESIONS OF TEETH

BY,
DR.REVATHY PARTHASARATHY

ETIOLOGY

4

- The presence of *Streptococcus mutans* and *Lactobacillus* and new sites of plaque appearance on the enamel surrounding the orthodontic attachments is common in patients undergoing fixed appliance therapy.

Salivary factors

- The amount and rate of enamel demineralization and the likelihood of enamel remineralization is influenced by salivary factors.
- Saliva also acts as a vehicle for the delivery of fluoride ions to the enamel and plaque.
- Adequate flows of the saliva helps in physical cleansing of carbohydrates from tooth surfaces, maintains its buffering capacity and anti-microbial activities.
- As the frequency of carbohydrate intake increases, the enamel surface may be exposed to overlapping episodes of acid without intervening repair, resulting in a net loss of minerals over time making it prone for enamel demineralization

Diagnosis and treatment planning

History

- History of pregnancy, gastrointestinal problems – anorexia, regurgitation
- Diet history – excessive consumption of citrus fruits, carbonated drinks, vinegar, yoghurt, vitamin c tablets – causes of dietary erosion
- Patients oral hygiene status – brushing technique, habits, type of dentifrice, bristle type
- Occupation of patient
- Parafunctional habits – bruxism, clenching, nail biting

Clinical examination

- Clinical features of erosion, abrasion and abfraction
- Test for mobility, percussion and palpation
- Pulp vitality testing
- Periodontal examination
- Analysis of occlusion

Radiographic examination

- altered lamina dura and widening of PDI space
- Hypercementosis and resorptions
- Pulpal calcifications

SUCCESS OF VENEERS

Indirect Composite Veneers 90%

Ultimately, ceramic is always going to deliver a more cosmetic result – BUT – how much more cosmetic? The new resins have a higher degree of polishability, excellent stain resistance and are tough.

Direct Composite Veneers 74%

the direct resin veneers will start to look tired in 8-12 years. In this time frame, there will be surface deterioration of the resin but the bond to tooth structure should still be good

DIRECT COMPOSITE VENEERS

M.KALAIARASI
