## **REPORT OF THE PROGRAM**

### **Program highlights:**

Dr. K. Loganathan has completed PGCTE (Post Graduate Certificate in Teaching of English) in EFL University, Hyderabad currently working as assistant professor of English in Chettinad Academy of Research and Education. He has received doctorate from SRM University gave a lecture on the importance of the English language as a common language in clinical practice even if we move to different states for practice. The lecture was interactive with fun activities and a learning experience. The first session of the program started with classes that covered the basics in English grammar which helped the students to understand the errors in their communication, also increased their interest towards the language. The next session the expectancy of the language was increased by specifically explaining about their common mistakes in their sentences that dentists use regularly during a conversation with their patients. Later on, the same day the students were ask to talk among themselves as a doctor: patient conversation and made the day more interesting. On the last session the students were given exercises based on the previous lessons. Mainly crossword puzzles were given individually for all students and quiz was also conducted as group activity. The entire event was a huge success with all the students being benefited from it.

at Sigapi Achi Banquet Hall

**ORGANIZED BY**  
**Dr. P. Rajesh**  
MDS, DNB, MNAMS, MFDSRCPS., FDS RCPS (Glasg).,  
**Principal, Chettinad Dental College & Research Institute**

## PROGRAM REPORT:

The Yoga session is conducted every Friday from 7.45 to 8.45 AM organised by Dr. Rajesh.P , Principal , Chettinad Dental College and Research Institute . The participants were instructed to attend the session on fasting. Yoga instructor Ms Vasuki T from Arogya Bharathi conducted the session. Yoga promotes mindfulness, encouraging practitioners to cultivate awareness of their thoughts and emotions. This mental clarity aids in reducing stress and anxiety, fostering a sense of inner peace. The practice of meditation, a fundamental aspect of yoga, facilitates deep introspection, allowing individuals to connect with their inner selves.

To enhance a better physical and mental health CDCRI conducts sessions for our students and faculties every Friday incorporated into the timetable (attached)

**KELAMBAKKAM - 603 103.**

# **ANALYTICAL SKILL DEVELOPMENT**

**CRITERIA TO IDENTIFY FOR SLOW PERFORMERS AND ADVANCED LEARNERS**

**MEASURABLE CRITERIA FOR LOW PERFORMERS**

1. INTERNAL MARKS (below 50%)
  2. POOR PERFORMANCE IN VIVA VOCE
  3. POOR LAB SKILLS AND PRACTICAL PERFORMANCE
  4. LOW INTERNAL MARKS WITH LOW ATTENDANCE AND PUNCTUALITY
- (Below 75%)

**MEASURABLE CRITERIA FOR ADVANCE PERFORMERS**

1. INTERNAL MARKS (>60%)
  2. GOOD PERFORMANCE IN VIVA VOCE
  3. GOOD LAB SKILLS AND PRACTICAL PERFORMANCE
  4. WINNING PRIZES IN SCIENTIFIC PRESENTATIONS
  5. CAPABILITY IN ARTICLE WRITING AND PUBLISHING JOURNALS
  6. SEMINAR PRESENTATION FOR ASSESSING THE KNOWLEDGE ON THE
- CHAPTER

## **ASSESSMENT METHODOLOGY FOR SLOW LEARNERS AND ADVANCE PERFORMERS**

### **ASSESSMENT METHODOLOGY FOR SLOW LEARNERS**

- ❖ The institution identifies the slow learners by their formative and summative performance in their internal examinations as well as by their teachers and mentors.
- ❖ The slow learner's performance in the examinations is below pass percentage (50%).
- ❖ Lab skills, viva and practical performance during lab hours and in practical sessions is also below 50%.
- ❖ Attendance below 75% along with marks below 50%
- ❖ Google forms are collected after every class where it is below 50%

### **ASSESSMENT METHODOLOGY FOR ADVANCE PERFORMERS**

- ❖ The institution identifies the advance learners by their formative and summative performance in their internal examinations which is above 60%.
- ❖ The skills of advance learners enable them to participate and laurels in scientific presentations in conferences such as seminars, posters, quiz, lab skill competitions etc.
- ❖ Further enhancement on their skill set is brought to light with the art of writing and publishing journals

# Department of Oral & Maxillofacial Surgery

## CRITERIA 2.2.1

### SLOW LEARNERS : IDENTIFICATION AND REMEDIAL

Name	Roll no	Marks
Aarif khan	501	29
Ahammed pervez	502	35
Aksheen balaji	504	35
Aradhana	505	28
Ashfaqur rahman	506	21
Brian shenart	509	29
Deepika dharshini	510	Na
Ezhilarasan	515	27
Gopika	518	29
Keerthiga N	533	35
Nanda kumar v	550	33
Nasrin fathima	551	33
Pranav karthe D	555	23.5
Praveena.p	556	11.5
Rakesh R	559	30
Ramsri.U.M	560	35
Rithi P	563	21
Sai venkat praneet	567	35
Shreya .V	578	21
Sowndharya	582	35
Sree manasa	583	35
Sri vanjuravalli	584	29

- **CONTINUOUS MONITORING AND INDIVIDUAL ATTENTION**
- **SPECIAL CLASSES WITH INDIVIDUAL SUBJECT FACULTY**
- **ASSIGN COLLABORATED STUDY WITH ADVANCED LEARNERS**
- **STUDENT AND PARENT COUNSELLING WITH PSYCHOLOGIST**
- **PERIODICAL ASSESSMENT AND EVALUATION**
- **ACTIVITY BASED LEARNING WITH FELLOW STUDENTS**

### **SPECIAL CLASSES WITH INDIVIDUAL SUBJECT FACULTY**

### **ACTIVITY BASED LEARNING WITH FELLOW STUDENTS**

## **IDENTIFYING HIGH ACHIEVERS:**

Based on:

- INTERNAL MARKS (>70%)
- VIVA VOCE
- LAB SKILLS AND PRACTICAL PERFORMANCE

Table 1

Name	Roll no	Marks
Magheshvaran	539	53
Roshini.S	565	55
Sharon.V	574	55
Shobika.S	576	55

## **SPECIAL PROGRAMS**

### **1. INTERCOLLEGE SCIENTIFIC PRESENTATION**

## 2. PROJECTS AND PUBLICATION WRITING

### Undergraduate topics:

- | S.No | TOPIC                                                                                                                                           |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | Radiographic morphometric analysis of implant related anatomy in the mandibular inter-foraminal region: A CBCT evaluative study                 |
| 2    | Clinical and Radiographic evaluation of effects of impacted third molars on adjacent hard and soft tissue anatomy- An evaluative analysis       |
| 3    | Evaluation of extraction related anxiety levels in undergraduate dental students performing exodontia and their outcome – A Questionnaire study |
| 4    | Prevalence of Body dysmorphic disorder in patients seeking facial aesthetic and                                                                 |

dental rehabilitative procedures using modified BDD scale : A questionnaire study

- 5      **Prevalence of and risk factors for postoperative complications after surgical removal of impacted mandibular third molar: An unicenter observational study**
- 6      **Knowledge, expertise and Choice of local anesthetic techniques used for maxillary and mandibular anesthesia for varied dental procedures by dental practitioners and the associated outcomes.**
- 7      **Facial Morphometric features and mandibular fractures – Evaluative analysis**
- 8      **Applications of artificial intelligence in oral and maxillofacial surgery- A literature review.**
- 9      **Current concepts in the management of Covid Associated Rhinomaxillary Mucormycosis and reconstruction : Systematic Review**
- 10     **Current concepts in antibiotic therapy in oral and maxillofacial surgery – Systematic review**
- 11     **Post traumatic maxillofacial scar management - Systematic review**
- 12     **Role of navigation in oral and maxillofacial surgery: Systematic Review**
- 13     **Virtual surgical planning : Applications and perspectives in maxillofacial surgery**
- 14     **Orthognathic surgery and temporomandibular joint disorders- Causal or Curative ? – Systematic review and meta-analysis**
- 15     **Atrophic maxillary rehabilitation: Review of literature and current concepts**

## **POSTGRADUATE STUDIES:**

<b>SNO</b>	<b>TITLE OF THE STUDY</b>
1	<b>Platelet rich plasma with microneedling for androgenetic alopecia: Prospective analysis of outcomes</b>

- 2      **Platelet rich plasma with microneedling for management of facial scars :  
Prospective analysis**
- 3      **Evaluation of systemic levels of metal ion in patients treated using miniplate  
osteosynthesis for maxillofacial fractures : An evaluative analysis**
- 4      **Serum metal ion levels released from dental endosseous implants and its  
effectiveness as a predictor of implant related complications : An evaluative  
analysis**
- 5      **Evaluation of Intraocular pressure in mid face fractures involving the orbit:  
prospective analysis**
- 6      **Secondary scar revision using z and w plasty to improve aesthetic outcome of  
facial scars from lacerated wound – prospective analysis**
- 7      **Comparative evaluation of outcomes of perioperative antibiotic therapy  
versus metronidazole irrigation combined with postoperative mouthwash on  
incidence of Surgical Site Infection in patients undergoing surgical removal  
of impacted third molars: A randomised clinical trial**
- 8      **Condylar fractures: Unicenter analysis of management principles and  
outcomes in 15 years**

### **3. ALLOTMENT OF COMPLEX CLINICAL SITUATIONS**

### **4. SEMINAR PRESENTATION**

### **5. ENCOURAGING TO READ IN LIBRARY AND REFER ADDITIONAL BOOKS**

## **Assessment**

The interns posted in the department are assessed during the postings :

- Clinical works
- Patients attended
- BLS
- Seminars
- Workshops
- Posters presented

**Chettinad**  
Dental College & Research Institute

**ORAL SURGERY**  
Assessment Form

Name of the candidate :

Attendance :

Period of posting from 3/9/19 to 2/10/19 Total No of days...30

Total No. of days present: 30

Total No. of days absent / leave

**Clinical and academic work done**

Clinical work done: 30

Total No of In patients attended :

CPR / BLS :

No of seminars taken

No of posters done

Proficiency of knowledge : Poor / Average / Good ☒

Competency in clinical Skills : Poor / Average / Good ☒

Responsibility, Punctuality, Research aptitude & Team work Poor / Average / Good ☒

**WORK DONE IN CAMPS**..... No of Cases.....

**Conduct and Attitude**

The Conduct of Mr/ Miss M. MEENAKSHI in the department, with the patients

Staff and Students was Good

Date : 3.10.19

### PHD TEST

Q1. If a researcher want to test the hypothesis that Tobacco chewing causes oral cancer for which he begins the study by recruiting those with oral cancer and those without. What kind of study is this? What are the other names of study design? What measurements do we use for this kind of study?

Q2. Ramu who has poor oral hygiene consumes too much of candies. As a result of this, he had developed cavities. What could be your diagnosis. Agent host & environment together constitute \_\_\_\_\_. Another who put forth a curve associated with Dental caries.

Q3. Impairment → disability limitation → handicap → disease.  
Relevance in correct sequence. Health is a state of complete \_\_\_\_\_ and \_\_\_\_\_ but not merely the absence of disease or infirmity.

Q4. Consider a population with 5000 people. It is found that 300 of them have been with bacterial infection this yr.

What is the incidence of the disease. What are the tools of Epidemiology. Who is the father of epidemiology?

Q5. A patient on clinical examination is found to be susceptible to dental caries. What is the primary level of prevention for this case? What are the other types of prevention? Tertiary prevention focuses of \_\_\_\_\_?

### Answers:

Ans 1. i) Case-control study ✓ Other Name: Incidence.  
ii) Cohort study  
Longitudinal

✓ Cross-sectional  
Case-control study.

ii) Measurements of case-control study.

- Selection of case control.
- Interpretation of analysis
- Exposure measurement.
- Matching.

$\frac{11}{15}$

Ans 2. i) Dental caries

ii) Key's Triad. - Agent Host Environment.

iii) Stieglitz's curve.

Robert Stieglitz - Graphical representation of pH and time.

### 4) Nuremberg code.

Code was designed to protect the integrity of the research subject, set out conditions for ethical conduct of research.

Voluntary informed consent of the human subject is absolutely essential.

Should yield fruitful results for good of society by other men, not random.

Experiment should about all necessary proper and must suffering and injury.

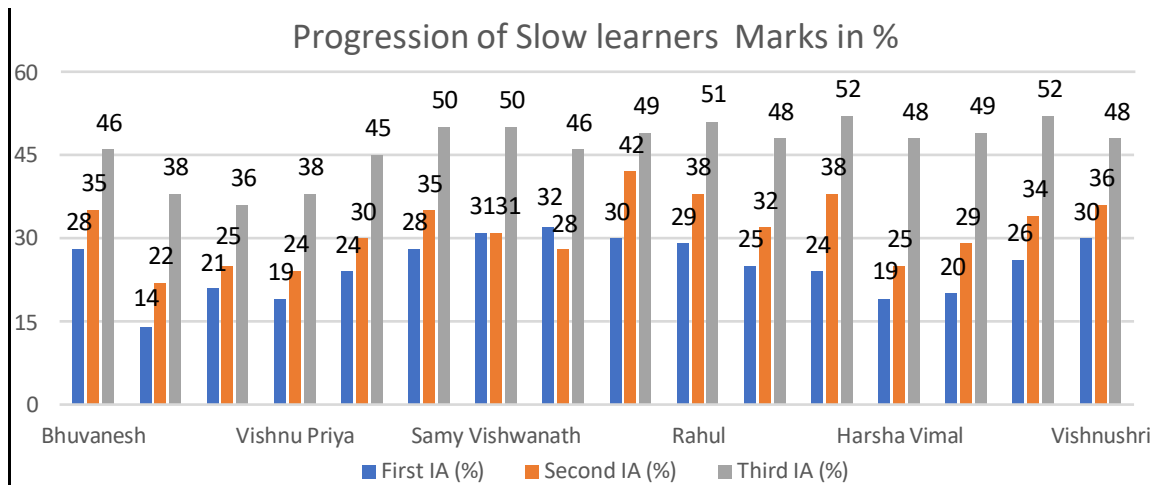

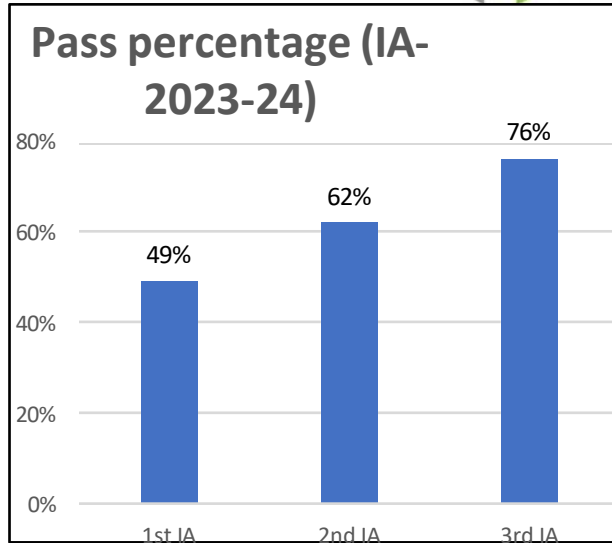

Degree of risk to be taken shall exceed determined by human importance of problem.

Proper preparation should be made.

Experiment should be conducted by scientifically qualified person.

During course of experiment, subject should be liberty to bring experiment to an end.

- Write in lab  
- To competing all answers fully  
- All flow charts  
- Answer provided

## PUBLIC HEALTH DENTISTRY

Kesavanaj  
26.08.2023

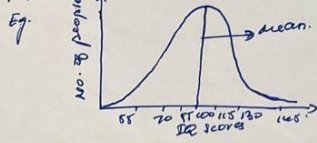

### Assignment - test of Significance

Test of significance is a common & formal procedure for comparing observed data with a claim, the truth of which is being assessed

→ claim is a statement about parameter like the population proportion or population mean  $\mu$

→ results of significance test are expressed in terms of probability that measures how well the data and claim agree.

population mean:

mean is finding a common group.  
finding the most occurring value.

### Starting Hypotheses

The first step in conducting a test of significance is to state Hypothesis.

There are two types

Null Hypothesis  
alternative hypothesis.

Based on nature of data it is further divided as  
one sided  
two sided

## DISCUSSION

  
**PRINCIPAL**  
**CHETTINAD DENTAL COLLEGE &**  
**RESEARCH INSTITUTE**  
**RAJIV GANDHI SALAI**  
**KELAMBAKKAM - 603 103.**

## Principles of Tooth Preparation:

The design of a preparation for a cast restoration and the execution of that design are governed by five principles.

- (i) presentation of tooth structure
- (ii) Retention and Resistance
- (iii) structural durability
- (iv) Marginal integrity
- (v) preservation of the periodontium

### (i) preservation of tooth structure.

- preserve the remaining tooth structure
- Intact tooth surfaces that can be maintained should be saved
- whole tooth surface should not be needlessly sacrificed in the name of convenience (or) speed
- some cases required limited amount of sound tooth structure removal, to prevent subsequent uncontrolled loss of tooth structure.
- This is the rationale for the removal of 1 to 1.5mm of occlusal tooth structure when preparing a tooth for an MOD onlay

## optimum degree of Tooth preparation Taper.

Arch.	M/P	F/L	overall
MAXILLA			
Anterior tooth	10	10	10
Premolar	14	14	14
Molar	17	21	19
Mandibular			
Anterior tooth	10	10	10
Premolar	14	12	14
Molar	24	20	22

- b) Freedom of displacement - Retention improved by limiting the paths of insertion
- c) Length - longer & Retentive
- d) substitution of internal features - Groove, box, pinhole
- e) path of insertion - Should be parallel to long axis of tooth

### (iii) Structural Durability:

- A restoration must contain a bulk of material, that is adequate to withstand the forces of occlusion.

- This is determined by

i) occlusal reduction

(ii) Functional cusp bevel

(iii) Axial reduction

### OCCLUSAL REDUCTION:-

- Inadequate occlusal clearance does not provide needed space for restoration of adequate thickness compromises the structural durability of restoration

## (ii) Retention and Resistance

Retention - prevents removal of the restoration along the path of insertion (or) long axis of the tooth preparation.

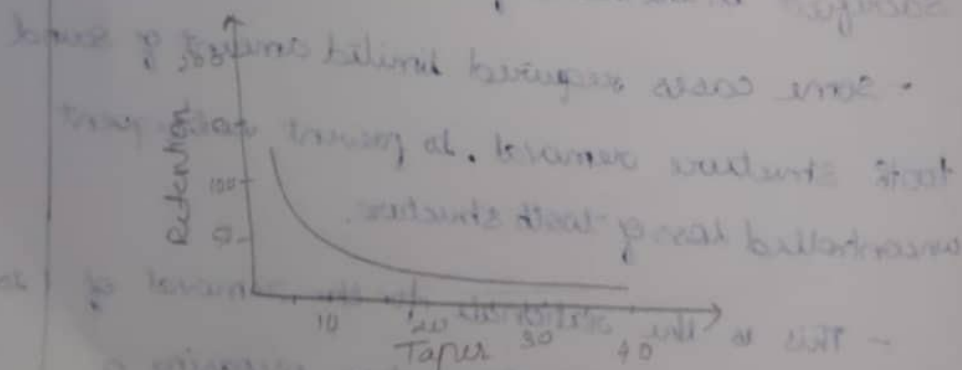

Resistance - prevents dislodgement of the restoration by forces directed in apical (or) oblique direction and prevents any movement of the restoration under occlusal forces.

### a) TAPER

- The more nearly parallel the opposing walls of a preparation, the greater should be the retention.

- But parallel walls are impossible to create,

so the preparation walls are tapered, to prevent undercuts, compensate for inaccuracies in fabrication procedure and permit complete seating of restoration during cementation.

The walls of a groove meet the axial wall at an oblique

the walls of groove must be perpendicular to retaining forces to resist displacement

## FULL METAL RESTORATION

1.5 mm -  $\rightarrow$  2 mm - functional cusp.

## METAL-CERAMIC

1.5 - 2  $\Rightarrow$  functional cusp.

1 - 1.5 mm - non-functional cusp.

ALL-CERAMIC - 2 mm.

(correct)

Shd not flattened  
the preparation

## FUNCTIONAL CUSP BEVEL

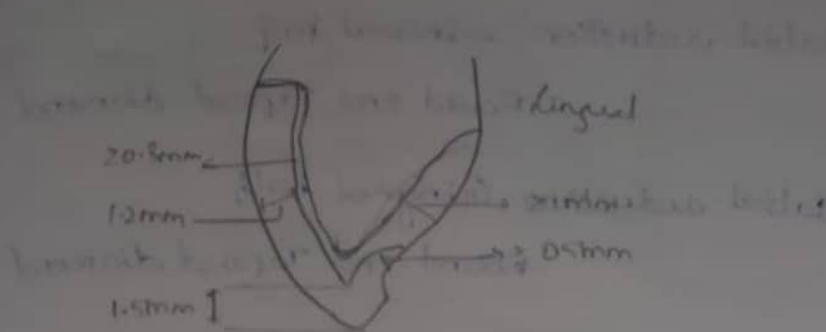

- A wide bevel placed on the functional cusp provides space for an adequate bulk of metal in an area of heavy occlusal contact.

- Lack of functional cusp bevel can lead to

- Thin area in casting
- over contouring or over inclination
- poor occlusion

## AXIAL REDUCTIONS

- Inadequate axial reduction will have thin walls subject to distortion (as result in over contouring the axial surface which could lead to periodontal problems)

### ② INITIAL STEP

- Depth orientation grooves with flat-end tapered diamond on labial and incisal surface.
- Full diameter of an instrument of known diameter is dig into the tooth. (1.2mm)

Depth orientation grooves

- 2 Grooves in gingival half of the labial surface
- 3 Grooves in the incisal half of the labial surface

### ③ Incisal Reduction (2mm) - round end Tapered diamond

- ↳ inadequate incisal reduction results in poor incisal Translucency.

Incisal reduction

## 2) METAL-CERAMIC TOOTH PREPARATION:-

- metal-ceramic tooth preparation also known as porcelain fused, consists of a ceramic layer bonded to a thin cast metal coping that fits over the tooth preparation.

- Adequate reduction is essential to achieve a good cosmetic result.

Anterior Metal-ceramic crowns

⇒ A uniform reduction of approximately 1.2 mm is needed over the entire facial surface.

→ Adequate reduction without encroaching upon the pulp. the facial surface must be prepared in two planes present on the facial surface of an incisor tooth.

Instrumentarium:-

- No. 25 Blade with Laboratory Knife
- silicon putty and accelerator
- Handpiece
- flat-end tapered diamond
- small-wheel diamond
- long needle diamond

Steps:-

- (i) depth orientation grooves
- (ii) Incisal / occlusion Reduction
- (iii) Labial / Buccal reduction in the area that to be veneered with porcelain
- (iv) Axial Reduction of proximal & lingual surface
- (v) final finishing of all prepared surfaces

## Marginal Integrity

Restoration can survive in the biological environment of the oral cavity only if the margins are closely adapted to the surface line of preparation.

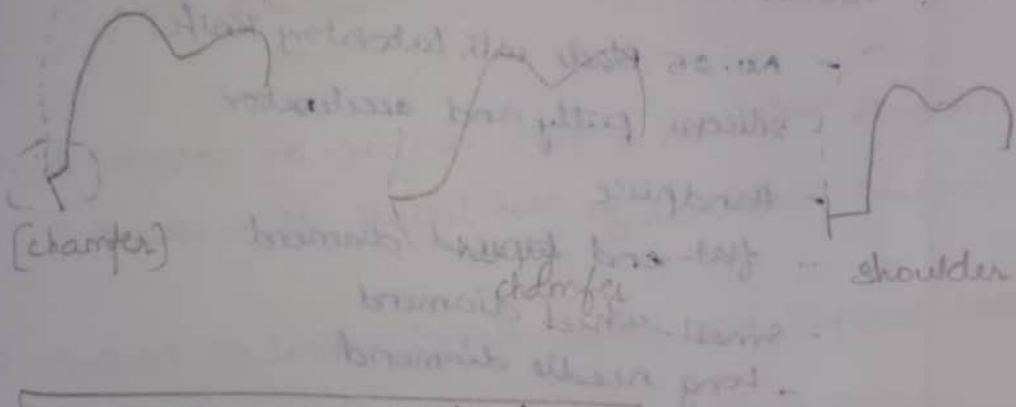

### Finish line configuration:-

The point at which a preparation terminates on the tooth is called finish line. This can be

chamfer, heavy chamfer, shoulder, knife edge etc.

### Line angle form:-

- should be rounded
- easy to pour impressions
- facilitates laboratory fabrication and fit.

## (v) preservation of periodontium.

- The placement of finish lines has a direct bearing on the ease of fabrication and the ultimate success of restoration.

- margins should be smooth and are fully exposed to cleansing action

- supra gingival margins are preferred for better cleansing

④ labial reduction - incisal half  
- Round End Tapered diamond

labial reduction - Gingival half  
- Round End Tapered diamond

labial Reduction  
(incisal half)

labial reduction  
(gingival half)

⑤ Lingual reduction (0.7 - 1 mm)  
- wheel diamond bur

⑥ Initial proximal Reduction

- long needle diamond

⑦ Lingual axial reduction - Torpedo diamond

Ⓐ Axial finishing - Torpedo bur

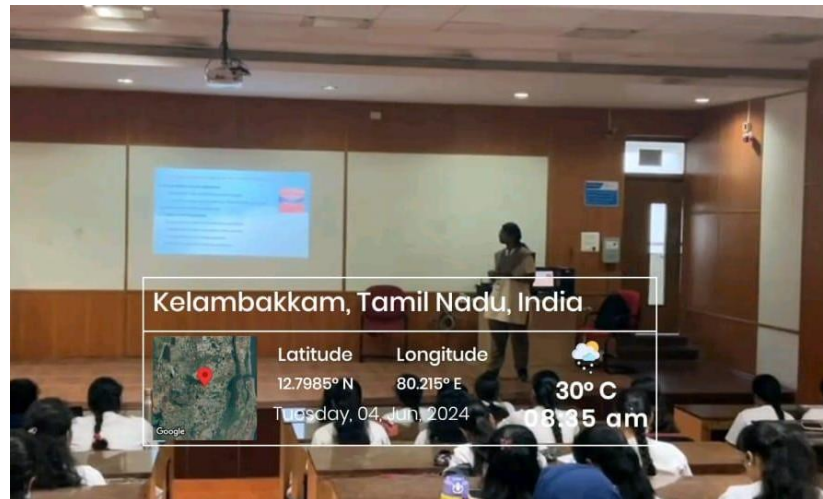

Ⓑ Axial and shoulder finishing - radial fissure bur

## LMS PPT WITH VOICE OVER

**SURGICAL ORTHODONTICS**

Definition:

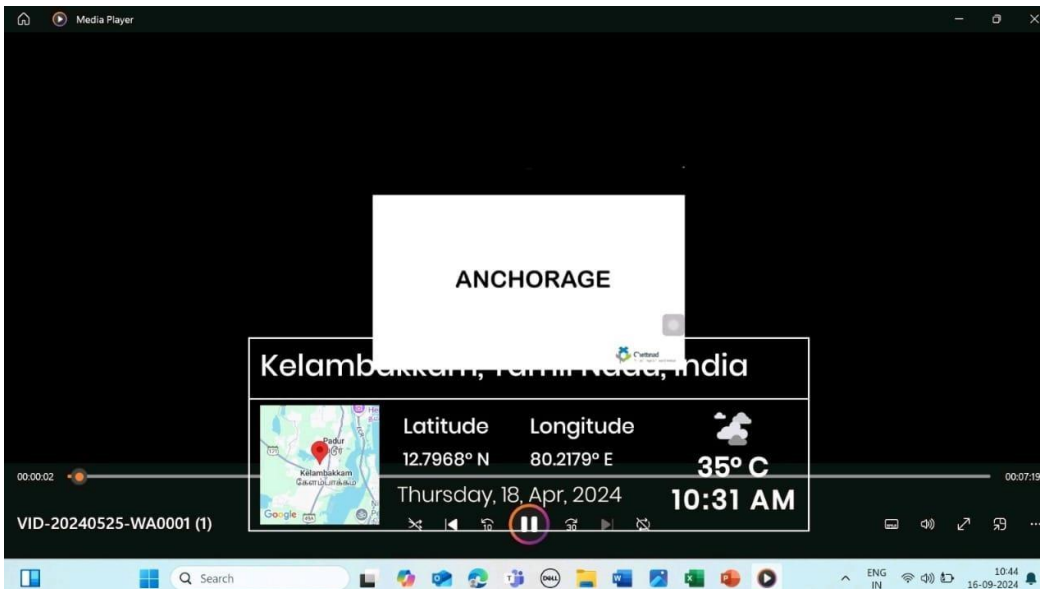

- Surgical orthodontics denotes the surgical procedures that are carried out before, during or after active orthodontic treatment.
- Surgical procedures can prevent or correct periodontal problems, facilitate and hasten orthodontic treatment, reduce relapse, add to post orthodontic stability and improve aesthetics and function for the patients.

### Department of Public Health Dentistry

#### CDE Program on Ethics in Public Health Bioinformatics – 2023-24

##### Detailed Program Report

A virtual CDE program for professional development on **Ethics in Public Health Bioinformatics** was conducted by the Department of Public Health Dentistry, on **10<sup>th</sup> June 2024, from 1.15 pm to 3.15 pm**, targeting dental faculty and students and aimed at enhancing their understanding of the growing relevance of ethics in bioinformatics in the field of dental public health. The speaker was **Dr.G.Aparna, MDS**, *Assistant Professor, Department of Periodontology, Sri Ramachandra Dental College and Hospital, Chennai*. The seminar covered key topics that outlined the importance, scope, and applications of bioinformatics in healthcare, with a focus on dental public health under the following headings

##### Introduction to Bioinformatics

Ethics plays a crucial role in public health bioinformatics by ensuring that data is used responsibly and with respect for individual privacy and confidentiality. It safeguards sensitive health information, promoting transparency and informed consent in data collection and sharing processes. Ethical principles help ensure that data use benefits the public while minimizing harm, ensuring equitable access and treatment for all populations. Additionally, ethics guide decision-making to avoid biases and protect vulnerable groups, ensuring that public health interventions are both effective and just.

Ethics in bioinformatics is essential for the responsible handling of biological and health data. It focuses on safeguarding privacy, ensuring data accuracy, and preventing misuse, especially with sensitive genetic or health-related information. Ethical guidelines promote transparency, requiring informed consent and equitable access to bioinformatics tools and research outcomes. By adhering to ethical principles, bioinformatics can advance science while protecting individual rights and fostering trust in the research and healthcare communities.

##### Branches of Bioinformatics

The seminar then explored the various branches of bioinformatics, which include:

1. **Genomics:** Focuses on analyzing whole-genome sequences, identifying genetic variations, and understanding the functional elements of DNA.
2. **Proteomics:** Deals with the study of protein structures, functions, and interactions, which are critical for understanding various biological processes and disease mechanisms.
3. **Transcriptomics:** Examines RNA transcripts and how gene expression changes under different conditions.
4. **Metabolomics:** Involves the study of metabolites and metabolic networks to understand biochemical processes within cells.
5. **Systems Biology:** An integrative approach that examines the complex interactions within biological systems, helping to understand how systems operate as a whole.

These branches provide a holistic view of biological processes, making bioinformatics a critical tool in both basic and applied biomedical research.

### Fields in Bioinformatics

The seminar elaborated on the various fields within bioinformatics, which include:

- **Computational Biology:** Develops algorithms and models to understand biological systems and relationships.
- **Biomedical Informatics:** Focuses on the application of bioinformatics in healthcare, particularly for improving medical practice and research.
- **Pharmacogenomics:** Studies how genetic variations affect individual responses to drugs, enabling the development of personalized medicine.
- **Environmental Informatics:** Investigates the impact of environmental factors on health and disease.
- **Public Health Informatics:** Applies bioinformatics to understand population health trends and develop strategies for disease prevention and control.

Each of these fields contributes to improving healthcare delivery and public health outcomes by leveraging data analysis and computational tools.

### Tools in Bioinformatics

The seminar provided an overview of popular bioinformatics tools and software used for data analysis, such as:

- **BLAST (Basic Local Alignment Search Tool):** Used for comparing an input DNA sequence to other sequences in a database to identify similarities.
- **Clustal Omega:** A tool for multiple sequence alignment.
- **R and Bioconductor:** A programming language and environment for statistical computing, widely used for bioinformatics analysis.
- **Cytoscape:** A software platform for visualizing molecular interaction networks and biological pathways.
- **Gene Ontology:** A tool that helps in the classification of gene functions across species.

These tools help researchers analyze biological data, visualize complex networks, and draw meaningful conclusions that are vital for advancing medical and dental research.

### Bioinformatics in Dental Public Health

The seminar discussed the increasing relevance of bioinformatics in dental public health. The integration of bioinformatics enables dental researchers to understand genetic predispositions to oral diseases, such as periodontitis, dental caries, and oral cancer. By analyzing large datasets, bioinformatics can identify biomarkers for early diagnosis, track disease outbreaks, and improve the understanding of microbial ecosystems in the oral cavity.

The application of bioinformatics in dental research helps in developing preventive measures, improving treatment strategies, and enhancing patient care in a cost-effective and timely manner.

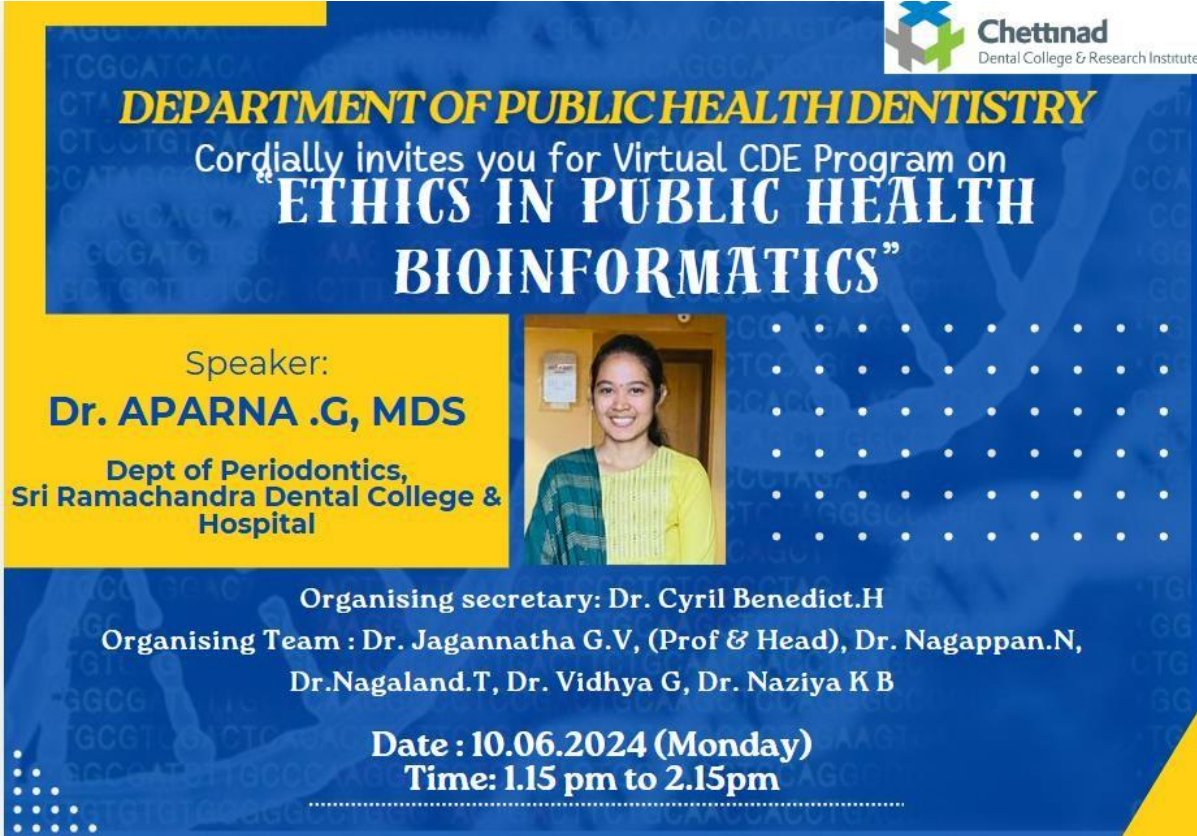

### **How Bioinformatics Can Help in Professional Development in Dental Public Health**

The final session of the seminar addressed how bioinformatics contributes to the professional development of dental public health professionals. By acquiring skills in bioinformatics, dental professionals can:

- **Enhance Research Competence:** Dental public health practitioners can use bioinformatics tools to analyze complex datasets and contribute to cutting-edge research in oral health.
- **Improve Patient Care:** Understanding genomics and proteomics enables practitioners to offer personalized dental care and develop targeted treatment plans based on genetic profiles.
- **Policy Making:** Bioinformatics helps in identifying trends and risk factors in large populations, contributing to more effective public health policies and preventive strategies.
- **Stay Competitive:** As healthcare becomes more data-driven, professionals skilled in bioinformatics are better equipped to remain competitive in the evolving field of dental public health.

In conclusion, this seminar provided a comprehensive introduction to bioinformatics and its potential impact on dental public health. It emphasized the importance of integrating bioinformatics into both research and clinical practice to improve patient outcomes, enhance professional development, and address public health challenges effectively.

#### **PROGRAM REPORT:**

The CDE program was organized by the department of oral and maxillofacial pathology and microbiology on personality development, menstrual hygiene and mental health and gender equity. The session began at 8.00am. The guest speaker Mrs. Selena from Whisper India company spoke about menstrual hygiene, body language and being positive. She highlighted on ABC that includes appearance, body language and communication and the importance of being interview ready and confident. The session involved displaying of videos on menstrual hygiene, mental health and scenarios of interviews and how to respond to tricky questions and how body language and communication is important while attending an interview. The students of first and second year BDS and interns participated in the event and benefited out of it. A Q&A session also was held towards the end in which all frequently arising doubts and questions were cleared. This was followed by a special talk by Dr. Christeffi Mabel , the head of department of oral medicine and radiology department. She spoke about the importance of personality development and personality development which plays a chief role in the field of dentistry. She highlighted the importance of menstrual hygiene and how important it is for a female professional. The session included distribution of gift vouchers and sanitary napkins to all the students and the staff that took part in the event. The event was concluded by reinforcing the quote of the event “ I rock , I rule ,I slay , I’m gonna do it, #my way “
