The screenshot shows a Zoom meeting interface. The main part of the screen displays a presentation slide from Chettinad Dental College & Research Institute. The slide is titled "Department of Conservative Dentistry and Endodontics" and "Clinical Discussion on Case history taking in Conservative Dentistry and Endodontics". The presenter is identified as "Dr Manu Unnikrishnan". Below the slide, there are four video feeds of participants. The first feed on the left shows a woman with the name "dhiwarka mai jagatheesh" below her. The second feed shows a man with the name "Manu Unnikrishnan" below him. The third feed shows a man with the name "Divya Bharathi" below him. The fourth feed on the right shows a man with the name "Dhiviya.N" below him. On the left side of the Zoom window, there are icons for chat, a pencil (annotation), and a red status indicator.

Microfill composites

- In the late 1980s the microfill composites or "polishable composites" were introduced.
- Instead of containing **large filler particles** typical of the conventional composites, the microfill composites **have colloidal silica particles** whose **average diameter ranges from 0.02 to 0.04 μm** .
- Because of the greater surface area per unit volume of these microfine particles, the microfill composites cannot be as heavily filled, an inorganic filler content of approximately **35% to 60% by weight**.
- Because these materials contain considerably **less filler** than do conventional composite resins, their **physical and mechanical characteristics are somewhat inferior**.
