- The **occlusal outline form in the region of the proximal box** is determined primarily by :
 - a) the bucco-lingual position of the contact
 - b) the extent of the carious lesion.
- The occlusal outline at the proximal marginal ridge(s) must be extended enough to make **breaking of the contact with the adjacent tooth easy**.
- Marginal ridge thinned but not removed

 The Occupational Safety and Health Act 1984 aims to:

1. Promote and secure the safety and health of people at work;
2. Protect people at work from hazards;
3. Assist in securing a safe and hygienic working environment;
4. Eliminate, reduce and control hazards; encourage cooperation and consultation between employers and employees;
5. Provide for the formulation of policies and for the co-ordination of the administration of laws relating to occupational safety and health; and
6. Promote education and awareness of occupational safety and health

Definition

Operative Dentistry is the art and science of the **diagnosis, treatment and prognosis** of defects of teeth that **do not require full coverage restoration for correction**, such treatment should result in the restoration of **proper tooth form, function and aesthetics**, while maintaining the **physiologic integrity of the teeth** in harmonious relationship with **adjacent hard and soft tissues** all of which should enhance **the general health and welfare of the patient**
