FRANKEL APPLIANCE Recording

INTRODUCTION

- **Functional appliance**
 - the frankel appliance has two main treatment effects.
 - Serves as template against which the cranio facial muscles functions.
 - The framework of the appliance provide an artificial balancing of the environment thereby promoting more normal pattern of muscle activity.

➢ secondly, the appliance removes the muscle force in the labial and buccal area that restricts skeletal root thereby providing an environment,

➢ Which enables skeletal growth.

FRANKEL'S FUNCTIONAL REGULATOR

- Orthodontic device developed by Rolf Fränkel [Zwickau] in 1961 in the form of a skeletonized oral shield that, while not in contact with the underdeveloped parts of the jaw, is intended to bring about their development.
- Because the plate elements remain free, the tongue is unhindered within the oral cavity so that its shaping force can exert its full effect.
