Working length is determined

Circumferential enlargement done by the file and irrigation is done with saline to remove infected dentin from the canal walls

Canal dried with paper points

Calcium Hydroxide is used to fill 2mm short of the radiographic apex

Remaining of the canal filled with calcium hydroxide and saline

Barium sulfate added to radiopacity

Dry pledged of calcium hydroxide is then ejected into the pulp chamber and forced against the paste ahead of it

Place temporary Restoration

Types

Gray MTA	White MTA
Contains tricalcium aluminoferrite (ferrous oxide) which is responsible for gray discoloration. So it causes discoloration of teeth. Therefore, it is not used for anterior teeth.	Ferrous oxide is replaced by magnesium oxide. So no tooth discoloration.
Large particles	Small particle with narrower size distribution
Longer setting time	Shorter setting time
Greater compressive strength	Less compressive strength

Difference between Apexogenesis and Apexification

Apexogenesis	Apexification
It is defined as the treatment of a vital pulp by capping or pulpotomy in order to permit continued growth of the root and closure of the open apex	It is defined as a method to induce development of the root apex of an immature pulpless tooth by formation of osteocementum / bone like tissue. (Cohen)
It is physiological process of redevelopment in vital infected tooth	It is the method of inducing the regenerative potential in a non-vital tooth
Normal or pulp tissue with minimal inflammation is present: 1. Completely (Direct Pulp Capping) 2. In the radicular portion (Pulpotomy)	Indicated in cases where there is no normal pulp tissue i.e., where the pulp has undergone irreversible pulpal necrosis.
Normal root end development takes place	Normal root development takes place rarely. Calcific barrier is formed clinically, on a radiograph or both

Process of caries formation

Ellis and Davey's classification (1960)

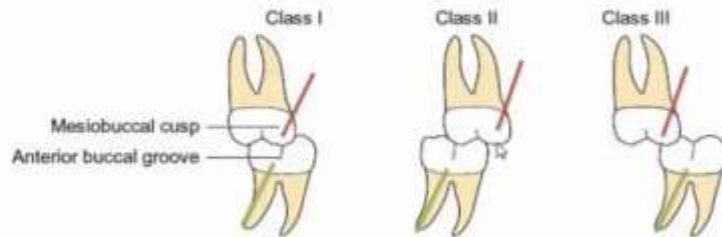

- Class I - Simple fracture of the crown involving only enamel with little or no dentin.
- Class II - Extensive Fracture of crown involving considerable dentin but not exposing dental pulp.
- Class III - Extensive fracture of crown involving considerable dentin and exposing dental pulp.
- Class IV - Traumatized tooth that becomes non-vital.
- Class V - Total tooth loss-Avulsion.
- Class VI - Fracture of the root with or with out loss of crown structure.
- Class VII - Displacement of tooth with neither crown or root fracture.
- Class VIII - Fracture of crown en masse and its displacement.
- Class IX - Traumatic injuries of primary teeth.

- Permanent molar relationship

The mesio-buccal cusp of the upper first permanent molar occludes in the buccal groove of the lower first permanent molar ——— Class I

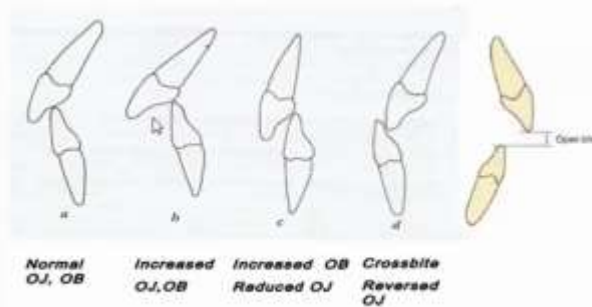

The mesio-buccal cusp of the upper first permanent molar occludes anterior to the buccal groove of the lower first permanent molar ——— Class II

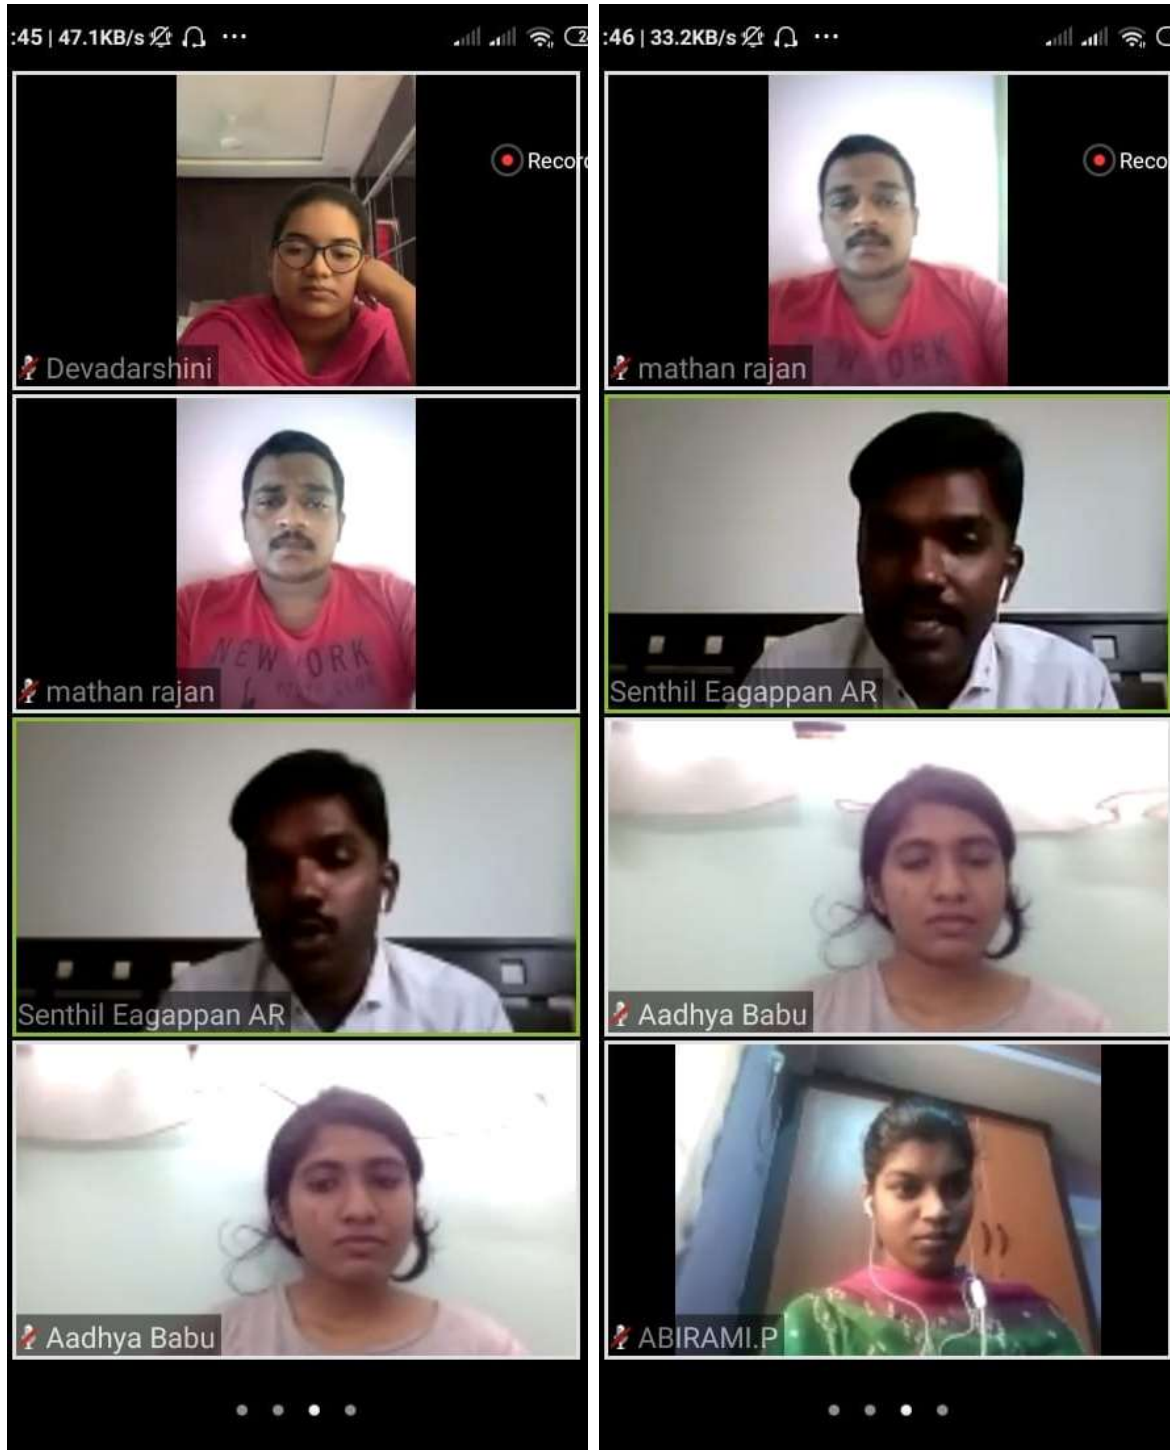

The mesio-buccal cusp of the upper first permanent molar occludes posterior to the buccal groove of the lower first permanent molar ——— Class III

- Crowding, Rotation
- Overbite (deep bite, Open bite)
- Overjet (Crossbite – anterior, posterior)

Definition

Observational Learning

Observational learning, also known as social learning theory, occurs when an observer's behavior changes after viewing the behavior of a model. An observer's behavior can be affected by the positive or negative consequences – called vicarious reinforcement or vicarious punishment – of a model's behavior. (Bandura 1986)

Video call participants: Dr. Devi Chandrika, Prithvishree Ganesan, Gokul S., and others.

Bandura's Bobo Doll Experiment

Merits of Hierarchy of Needs

- Based on totality of personality development
- Reality centered
- Different perception of means and ends
- Spontaneous and simple-natural
- Acceptance of self and others
- Humility and respect
- Freshness of appreciation
- Creative
- Peak experience than average person

Rating 3 : positive(+)

- Accept R, at time cautious
- willingness to comply with the dentist , at times with reservation but follows the dentist direction cooperatively

Rating 4 definitively positive(++)

- Good rapport with dentist ,
- interested in the dental procedures laughing & enjoying

12:06 PM 4/12/2023

You are screen sharing Stop Share

CLASSIFICATION OF CHILDREN'S BEHAVIORS:-

WRIGHT'S CLASSIFICATION

1. CO-OPERATIVE BEHAVIOR:-

Reasonably relaxed, have minimal apprehension
and can be treated by a straight forward behavior shaping approach.

3- FACTORS INVOLVING THE DENTIST:-

- A. Appearance of the dental office
- B. Personality of the dentist
- C. Time and length of appointment
- D. Dentist's skill and speed
- E. Use of fear promoting word
- F. Use of subtle, flattery, praise and reward.

The image shows a screenshot of a video lecture presentation. The main content area displays text about the classification of children's behaviors and factors involving the dentist. There are two images: one of a dentist examining a child and another of a decorated dental office. On the right side, there is a vertical strip showing four video feeds of participants in a Google Meet session, with names like 'Devi Chandrika', 'Abhinav Reddy', and 'Aateef Ahmed' visible. The bottom of the screen shows a Windows taskbar with various application icons and a search bar.

WPS Office Dental behavior... and Children X +

4-Contingency Management

This technique is based on operant conditioning theory of Skinner.

Reinforcement

Reinforcement can be :-

- **Positive reinforcement** - presentation of reinforcer which increases the frequency of desired behavior.
- **Negative reinforcement** - withdrawal of reinforcer which increases the frequency of desired behavior.
