Talking:

PREVENTIVE ORTHODONTICS

DEPARTMENT OF PEDIATRIC DENTISTRY
DR.DIVYA.N

Space Analysis

Chettinad Dental College & Research Institute

Talking:

Upper Arch	
A. Space Available (Arch circumference from mesial of first molar to mesial of first molar)	= mm
B. Space Required (Combined MD width of the permanent teeth from 5 to 5)	= mm
Difference (A - B)	= mm

Lower Arch	
A. Space Available (Arch circumference from mesial of first molar to mesial of first molar)	= mm
B. Space Required (Combined MD width of the permanent teeth from 5 to 5)	= mm
Difference (A - B)	= mm

BAND AND LOOP SPACE MAINTAINER

Chettinad Dental College & Research Institute

Talking:

Impression making and cast:

- Alginate impression - band - pour cast

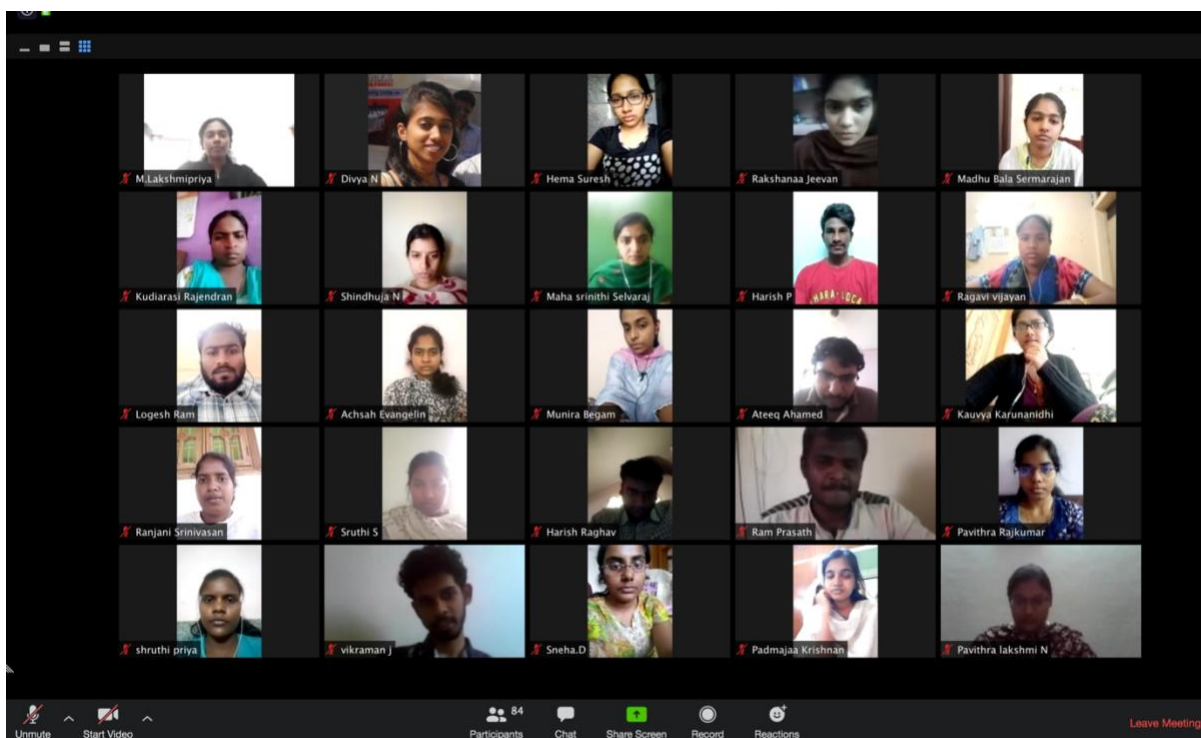

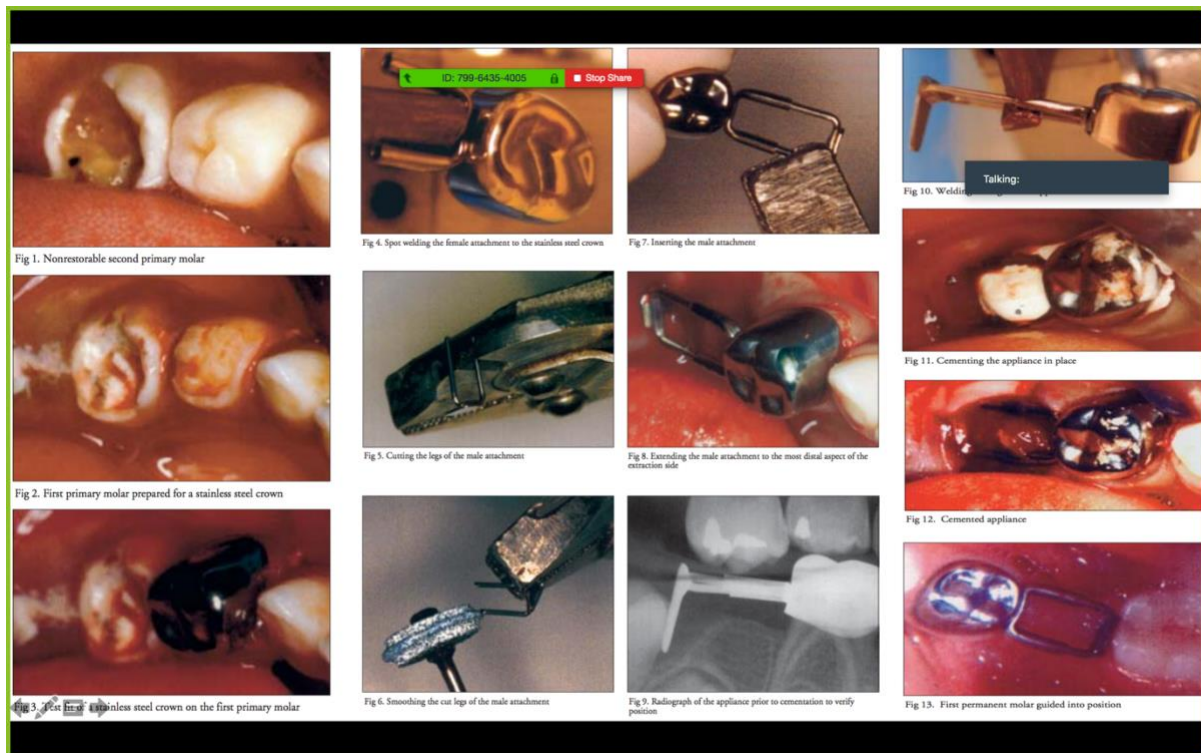

Soldering:

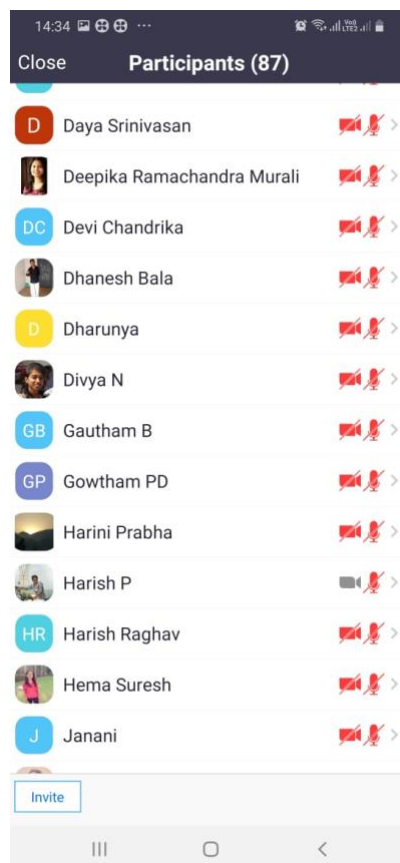

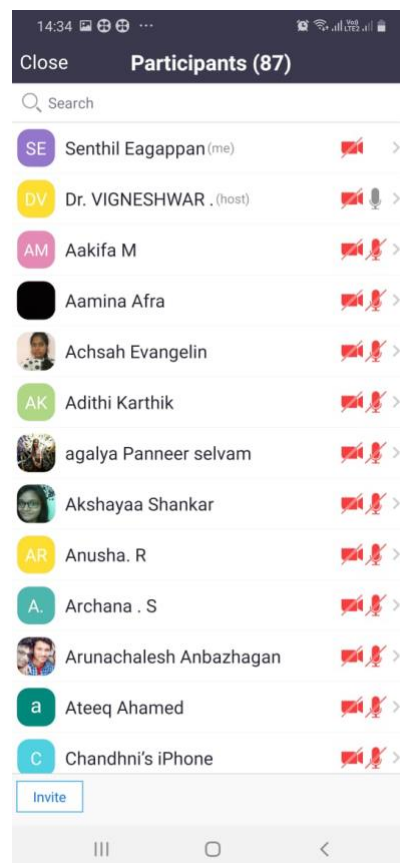

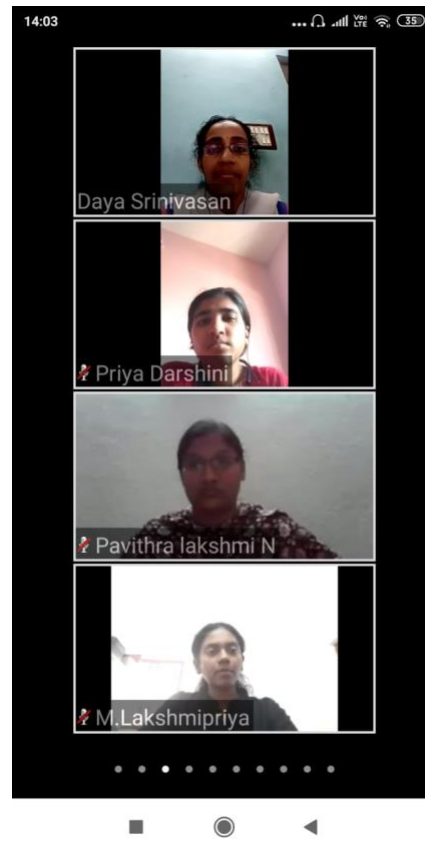

- Stabilize wire on cast - wax and plaster
- solder contact areas on band

Polishing:

- Heatless green stone
- Gold rouge or rag wheel

**F-
Fluoride**

**DR. DEVI CHANDRIKA
DEPARTMENT OF PEDODONTICS**

Slide 1 / 61

Chettinad

Dental College & Research Institute

WPS Office | FLUORIDES PDF.pptx

Slide 40 / 61

Duraphat

- 5% sodium fluoride in organic lacquer
- 22,600 ppm fluoride
- Hardens into a yellowish brown coating in the presence of saliva.

Fluorprotector

- Contains difluorosilane in polyurethane lacquer
- 7,000 ppm of fluoride.

Carex

- Contains lower fluoride concentration than duraphat (1.8%) but anticaries effect is equivalent to duraphat.
- The amount of fluoride introduced into the enamel is more with fluor protector but duraphat is found to be more effective in caries solution.
- This is because the silane fluoride of fluorprotector reacts with water to produce hydrofluoric acid, which penetrates into enamel readily and forms tags 0.5-1.0 μm long, leading to increased fluoride concentration. But these tags prevents further fluoride penetration thus reducing the anticaries effect.

Chettinad Dental College & Research Institute

WPS Office | FLUORIDES PDF.pptx

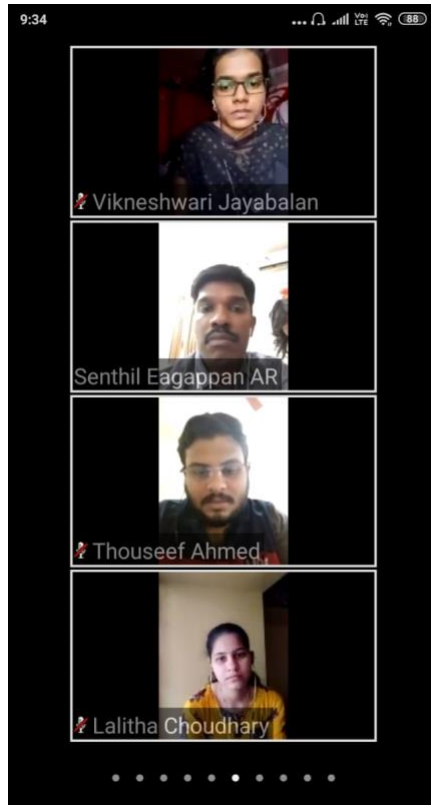

Slide 41 / 61

FLUORIDE GEL:

- Easier to work permits application in trays—entire dentition can be treated at one time
- NaF and APF gels—contain the same concentration of fluoride and pH as their respective aqueous solutions. They are as effective as the solutions in caries reduction.
- Gels contain—cellulose compound for viscosity
- Thixotropic gels—gels that flow under pressure penetrate better interproximally and do not drip.

POSITIVE PREVISIT IMAGERY

- Showing positive dental images prior to visit

PARENTAL PRESENCE OR ABSENCE

2. Offer very young child – physical and psychological support

3. Observe reality –child's treatment

For practitioners to:

1. Gain patient attention and improve compliance

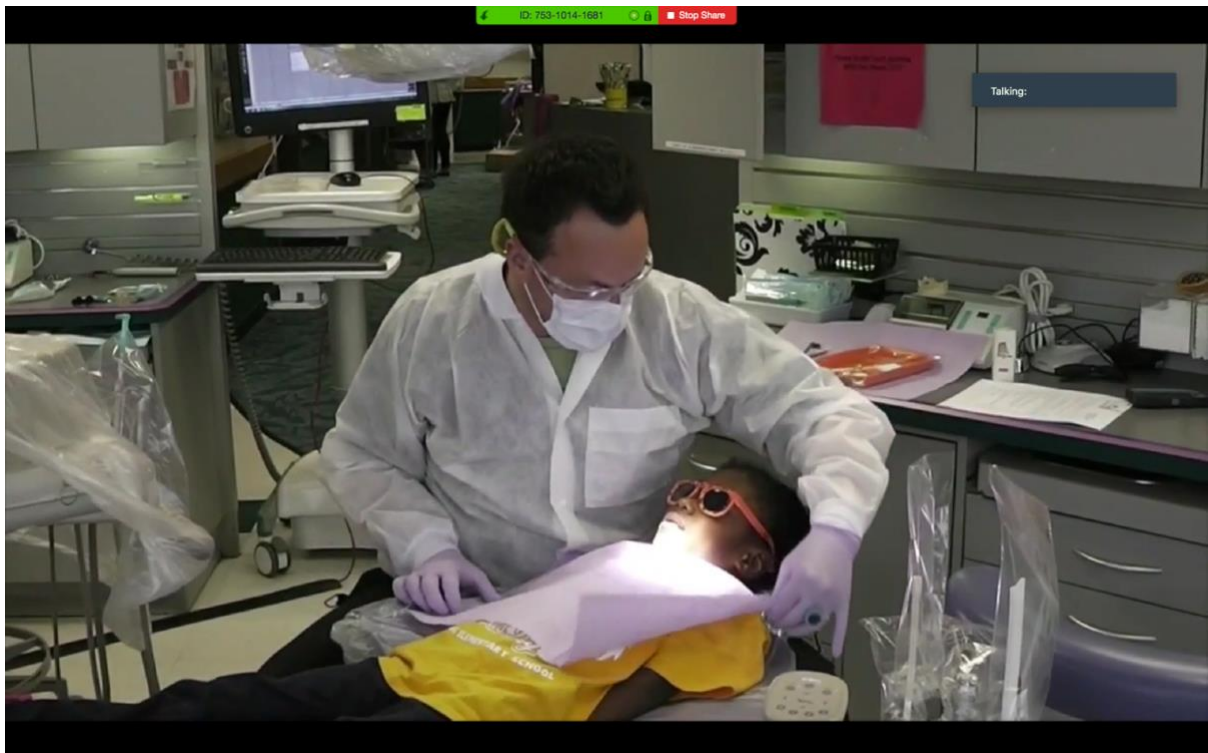

2. Avert negative/avoidance behaviors

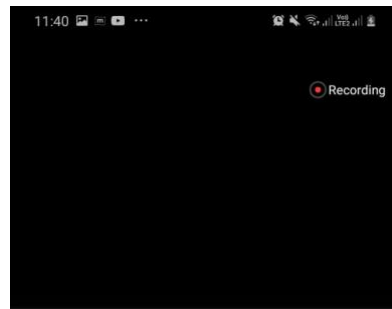

3. Establish appropriate dentist-child roles

4. Enhance effective communication

5. Minimize anxiety - positive dental experience

6. Facilitate rapid informed consent – changes in treatment/ behavior guidance

DENTIST BEHAVIOR

- Communicative behavior of dentists – major factor- patient satisfaction
- Not all parents express desire for involvement
- Low parent satisfaction- rushing through appointments, not taking time to explain procedures, barring parents from examination room, impatient
- Relationship/ communication problems – initiate malpractice actions – no error- lack of caring/ collaboration
- Efficacious response – vocalizing, directing, empathizing, persuading, giving patient feeling of control, operant conditioning

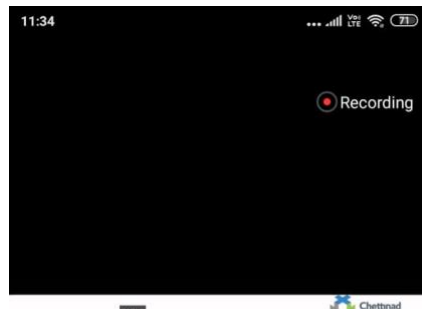

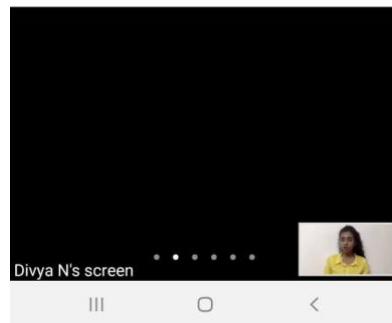

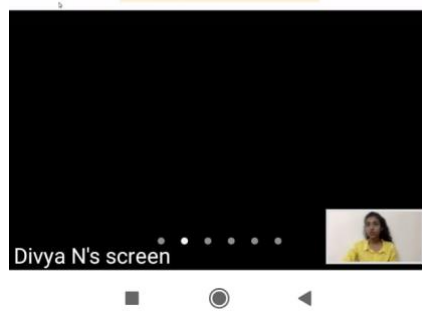

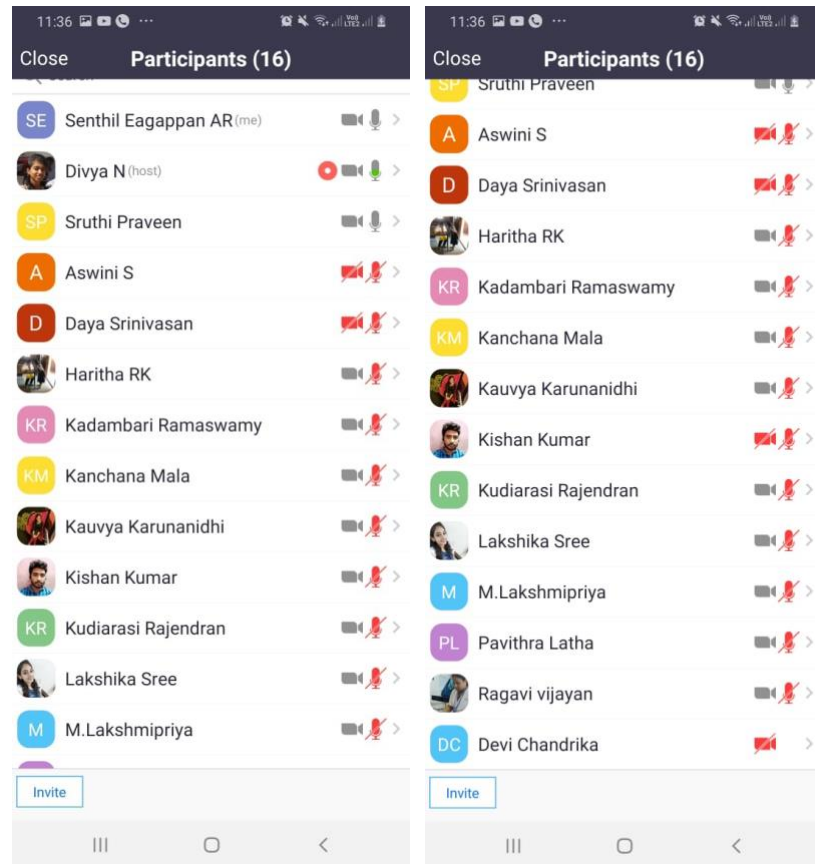

TABLE 24.4 Frankl Behavior Rating Scale*

Behavior Score	Classification	Description
Frankl 4	Definitely positive	Good rapport with the dentist interested in the dental procedure. Laughing and enjoying the situation.
Frankl 3	Positive	Accepting of treatment but at times cautious. Willing to comply with the dentist, all times with cooperation, but patient follows the dentist's directions. Cooperative.
Frankl 2	Negative	Reluctant to accept treatment. Incooperative. Sullen, withdrawn.
Frankl 1	Definitely negative	Refusal of treatment. Crying, vociferously fearful.

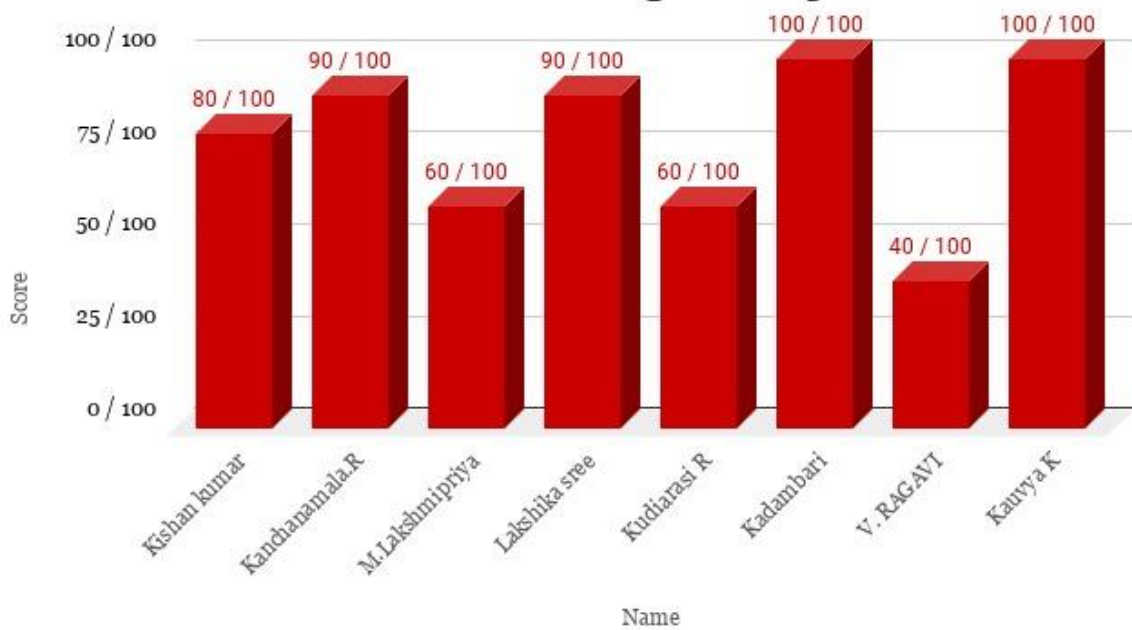

*The children who are too young to cooperate, the best perspective is preferred.

Untitled form - Google Forms

Enumerate steps of Pulpotomy

8 responses

1. Isolation of the tooth
2. Removal of carious tooth structure
3. Opening of roof of pulp chamber
4. Removal of coronal pulp tissue using bur/excavator
5. Placement of medicament over the root canal opening
6. Sealing off the root chamber
7. Intracoronal restoration/ stainless steel crown
8. Periodic radiographic and tactile evaluation

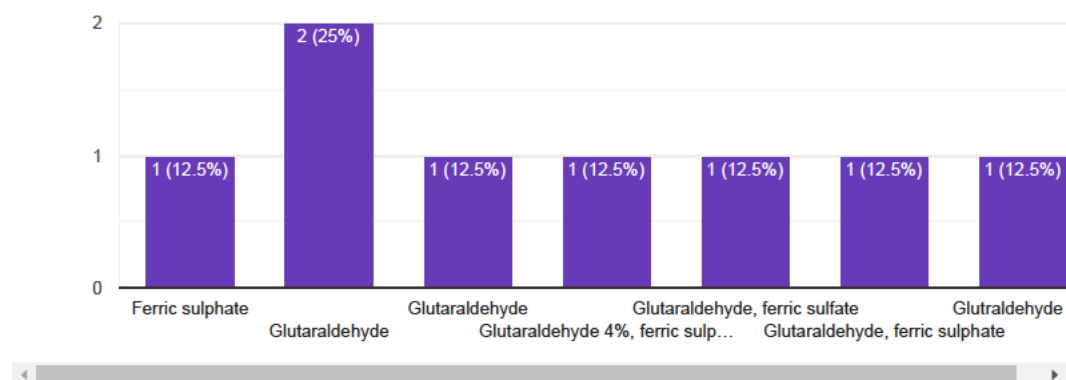

Anesthesia

Isolate the tooth with rubber dam
Removal of coronal portion of pulp with sharp spoon excavator
Place dampened formacresol for 5 mins
Check for any bleeding spots
Then place ZnOE
Placement of stainless steel crown

Anaesthesia-isolation-peripheral caries removed-roof of pulp chamber removed-coronal pulp removed with SHARP spoon excavator-formocresol placed-check for bleeding-saline irrigation - ZOE placed-

Name a Pulpotomy medicament which is based on Preservative mechanism

8 responses

What is pulpectomy? *

Complete removal of roof and Infected pulp from pulp chamber of primary teeth in order to gain access to the root canals which are debrided , enlarged and disinfected and followed by obturation with a resorbable material.

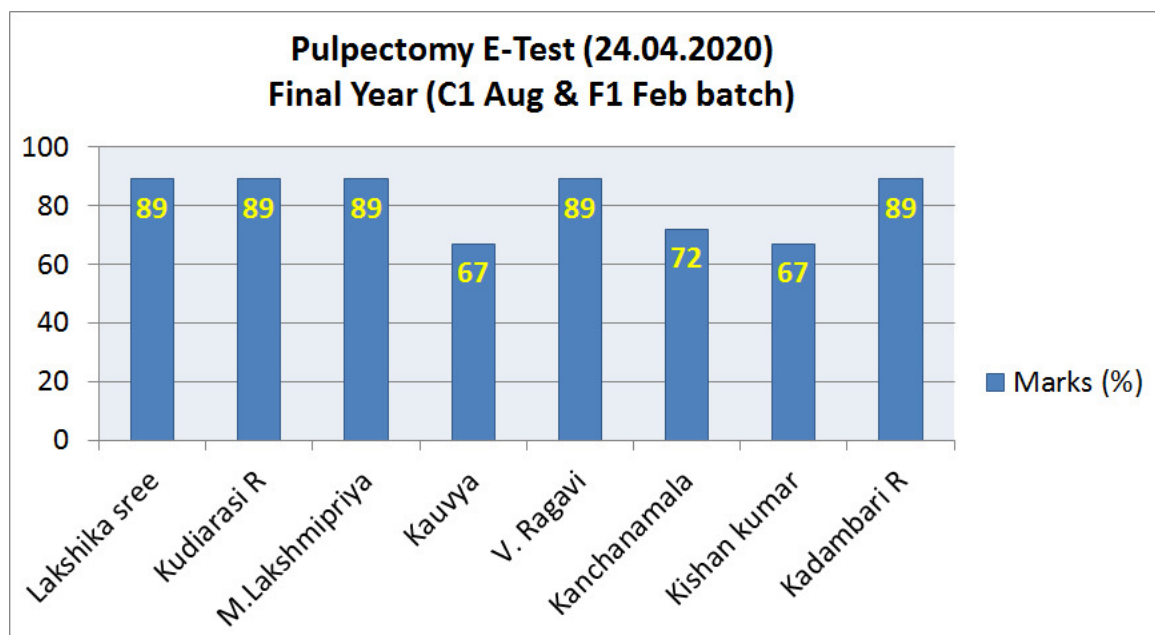

Which is not a Indication of pulpectomy *

- ☐ Tooth with irreversible pulpitis
- ☐ Abscess
- ☒ Tooth with caries penetrating the pulp chamber
- ☐ Non vital primary tooth
- ☐ Primary anterior teeth with fracture involving pulp

Which is a contraindication of pulpectomy? *

- ☐ Tooth with internal resorption
